

*Tired of being exposed to radiation through yearly mammograms?\**

*Has thermography left you confused?*

*Have you had surgery, (implants, mastectomy, biopsies) that make mammogram interpretation difficult?*

*Alfa is Redefining Breast Health Monitoring with a Revolutionary Analysis Method*

**SPOT A PROBLEM** before it becomes an issue.

**FIND OBJECTIVE CLUES** for potential disorders by revealing unseen elements, understand why the disorder evolved and pinpoint effective treatment strategies.

**GET A COMPREHENSIVE PICTURE** of your breast health that you can trust.

**ACT PREVENTIVELY!**

*Try our radiation-free, painless, safe method for breast scanning, with an **80% accuracy\*\****

## Our Method

**Dynamic Regulation Thermometry:** A comprehensive path to safely scan your breasts and understand subtle causative factors involved in disorders such as cancer and other diseases.

**Alfa's technology:** The first comprehensive breast scan that identifies physiological dysfunction very early in the disease process. A non-intrusive, state-of-the-art health testing system; developed by European doctors and further enhanced in the USA.

**What is Alfa's Method?** Measurements of temperatures of specific points on the skin are taken before and after exposure to an ambient (normal) room temperature. As the nervous system reacts to the cool air, (analogous to the 'fight or flight' reaction), organ health 'signals' are sent through regional nerve ganglia that connect and innervate the capillaries of the skin. Temperature behaviors provide organ and tissue health information are then analyzed by our revolutionary AlfaVue software.

*\* thermography is not a substitute for MRI or mammography - \*\*studies have shown compared with mammography alone*

## Comparing Options

Mammograms can identify breast tumors by using X-rays. Thermography (Infrared cameras) have been dismissed by conventional medicine due to exceedingly high amounts of false positives/negatives.

**Alfa Dynamic Regulation Thermometry** digitally records skin temperatures controlled by the sympathetic nerves. AlfaSight is a physiological assessment tool reflecting organ and tissue information by way of skin temperature changes.

THERMOGRAPHY	MAMMOGRAPHY	ALFA REGULATION THERMOMETRY
<ul style="list-style-type: none"><li>• High false-positive rate (50%)</li></ul>	<ul style="list-style-type: none"><li>• Moderate accuracy (70%)</li></ul>	<ul style="list-style-type: none"><li>• High accuracy (80%)</li></ul>
<ul style="list-style-type: none"><li>• May see local factors leading to disease</li></ul>	<ul style="list-style-type: none"><li>• Tumor may be developing for years before it is detectable</li></ul>	<ul style="list-style-type: none"><li>• Often sees dysfunction before disease.</li></ul>
<ul style="list-style-type: none"><li>• Radiation-free</li></ul>	<ul style="list-style-type: none"><li>• Uses radiation (can damage DNA and is toxic to the body)</li></ul>	<ul style="list-style-type: none"><li>• Radiation-free</li></ul>
<ul style="list-style-type: none"><li>• Pain-free</li></ul>	<ul style="list-style-type: none"><li>• Often painful</li></ul>	<ul style="list-style-type: none"><li>• Pain-free</li></ul>
<ul style="list-style-type: none"><li>• Compression-free totally non-invasive</li></ul>	<ul style="list-style-type: none"><li>• Strong compression may create inflammatory reactions</li></ul>	<ul style="list-style-type: none"><li>• Compression-free totally non-invasive</li></ul>
